VIRTUAL WEBINAR

Transforming Education through Digital Assets (Data, Compute, and AI) in the Classroom

Frank Wuerthwein, Ph.D.
Director of the San Diego Supercomputer Center
Professor at UC San Diego

November 3, 2026
12:00-1:00 ET (Virtual event)

The introduction of digital assets into the classroom is revolutionizing higher education. We are on the precipice of fundamental changes in how we teach, the tools we use to achieve educational outcomes, and even some of the outcomes we aspire to achieve. In this talk, we start by introducing the core aspects of this revolution, touch upon the core challenges institutions face in providing the necessary tools, and provide the outline and status of a strategy that promises all roughly 4,000 institutions of higher education in the USA to own the relevant digital assets to participate in this revolution.

Campus leaders, Researchers, Educators, Research Facilitators, Research IT Professionals, and Students can all benefit from this webinar. *No prerequisites or configuration setup required.*

Speaker Biography: Dr. Wuerthwein received his Ph.D. in physics from Cornell University, specializing in elementary particle physics, followed by a Millikan Fellowship at Caltech, and a Junior faculty position at MIT. His interests today are turning bytes into knowledge via data analysis and developing and operating globally distributed cyberinfrastructure to do so effectively.

Please join us for this informative webinar and feel free to share the event information with your networks.
